Dear Instructure hiring team,

The last multinational reseller program I built started with no channel at all. As commercial lead for BinaryTech, a medical IoT company, I opened the EU market by going straight to the biggest names in diagnostics, and closed an exclusive global agreement to resell through the **Roche Diagnostics** channel — a 7-figure, 3-year-minimum partnership that produced multiple NHS wins and a 10-year deal with OLVG in the Netherlands. That is the shape of work your VP, Partner Ecosystem needs to do: find the partnership that changes the company's trajectory, negotiate it at C-suite level, then build the onboarding, enablement and measurement that make it repeatable.

I have run that playbook at scale. At Brightcove I progressed from Senior Solutions Engineer to Vice President, Asia, and grew the region from ~\$4M to ~\$11.5M ARR across 15+ countries. Partnerships were central: I recruited 15+ strategic ISV and agency partners, ran regional execution of the global partner programs, and built a channel that drove 35% of regional pipeline — while leading a 20+ person team spanning sales, solutions engineering, channel and customer success, and closing the company's largest global deal (~\$4M ARR, \$12M over three years). Forecasting, budget ownership and bookings targets were mine.

Education is a sector I have sold into, not just admired: I led UK market entry for Campus Plus, an Australian edtech, opening the office and signing a UK university. And I am technical enough to be credible with your Integration and ISV partners — an engineer by training who still builds with APIs and AI tooling today.

I would welcome a conversation about how I would scale Instructure's partner ecosystem into the competitive differentiator this role describes.

Best regards,
Ben Morrell
