Hello Canonical team,

Thank you for the opportunity. I have built a partner channel from nothing three times, and carried the revenue number through it. That is the ownership your posting describes, forecast and bookings in the same pair of hands, and it is the part of alliances work I enjoy and can add most value.

In terms of the number: at Brightcove I recruited 15+ ISV and agency partners across Asia Pacific into an ecosystem that did not exist when I arrived. That channel reached 35% of regional pipeline whilst I led the region from ~$4M to ~$11.5M ARR, at 120%+ of quota every year.

The governance half is the harder one, I think. At Livepeer the partnerships existed and the operating system behind them did not, so I stood up the forecasting, the deal/contracting cadence, the partner training and the CRM discipline.

On routes to market - for BinaryTech, a medical IoT company of only 15 people, I sourced Roche Diagnostics cold and built the business case from nothing. It became an exclusive global reseller agreement with an $80B business.

Most common - it stalled inside Legal and Compliance. Unsticking it meant keeping Roche's commercial sponsors visible so the process carried business pressure, whilst holding firm on exclusivity and the minimum commitment.

It ended up being signed. That channel produced multiple NHS sales and a ten-year contract with OLVG - a very large hospital group in Amsterdam.

On engineer to CxO - I trained as an engineer and designed Nine Network's all-IP system for the Beijing 2008 Olympics on my own. I still build: Next.js/TypeScript, LLM applications and a production MCP server.

Open source is why this one interests me. Leading global Go to Market for Livepeer, an open video network, taught me how an open project earns money. The software is free, whilst the assurance/integration work is what companies pay for. That is recognisably the Ubuntu Pro conversation.

To be clear on the gap - I have not run a GSI practice or a silicon/OEM alliance, however the forecasting and the partner economics travel across all of those routes.

Happy to hop on a call to talk through any of the above.

Thanks for your time and your consideration,
Ben Morrell
