Hello,

Thank you for the opportunity to put myself forward for Head of AI Expansion.

QVAC's pitch is that an organisation can run useful AI on its own hardware and keep its data. I think that is a strong position, and the hard part is commercial. Someone has to find the organisations where privacy and control decide the purchase, then get the first deployments live with a business case behind them.

That is the work I have done for most of my career. At Brightcove I led the team that closed the company's largest global deal, **$12M over 3 years**. As VP Asia I built a 20+ person team across Singapore, Mumbai and New Delhi and grew the region from **~$4M to ~$11.5M ARR**.

More recently I originated an exclusive global reseller agreement for a medical IoT company through the **Roche Diagnostics** channel, seven figures on a three-year minimum. Roche is an $80B regulated business, and the deal stalled in legal and compliance for months.

What got it signed was keeping Roche's commercial sponsors engaged whilst answering every compliance question fast and in full. The channel then produced NHS sales and a ten-year contract with OLVG.

In terms of the AI side - I'm an engineer by training (MEng) and I build my own AI tooling: LLM agents, a production MCP server and GTM automation on the Claude API.

That means I can work through a use case with your engineers, then take it to a CIO as a business case. At Livepeer, a decentralized video infrastructure network, I signed Tier-1 partnerships including Aptos ($500K).

To be clear on two things. I work remotely from Valencia and am comfortable travelling for the meetings that matter. And I have not sold AI into governments, so that is the part I would be learning fastest.

Happy to hop on a call to talk through any of the above.

Thanks again and looking forward to hearing from you,
Ben Morrell
