Available as an independent contractor through my own business entity

Hello Supabase team,

Thanks for writing the SA Leader posting the way you did. Most read as a wish list. This one reads as a scorecard - team ARR bookings, deal velocity, PoC win rate, handoff quality - which is how I have run technical sales teams.

Firstly - the arc. I came up through pre-sales, Grass Valley across 12+ Asian countries and then Senior Solutions Engineer at Brightcove. Within three years I was Technical Director, technically responsible for every deal and customer in the region, then Vice President.

In terms of the number - as VP I built and led a 20+ person team across sales, solutions engineering, channel and customer success. The region grew from **~\$4M to ~\$11.5M ARR at 120%+ of quota** every year. Turnover stayed under 10% and 80% of AE promotions were home-grown, which I think is the fairest measure of coaching.

Player-coach was the only model that worked. I stepped in on the largest evaluations, including the company's biggest global deal (~\$4M ARR), and spent the rest of the week in 1:1s, deal reviews and PoC scoping. I owned customer success in the same region too, so a sloppy pre-sale handoff landed straight back on my own desk.

Coverage across channels is familiar ground: direct, systems integrators/solution providers, ISVs, resellers, 20+ startup founders through Ziplake. At Livepeer I built the commercial operating system from scratch - forecasting, contracting cadence, CRM, training - so quality did not depend on tenure.

Two things specific to Supabase. I still build in production (LLM applications on the Claude API, a remote MCP server, Next.js on Vercel, a Cloudflare Worker), so your SfP/OAuth channel is a stack I ship on. To be clear - I have not run Postgres at scale or carried a hyperscaler alliance. Early on I would lean on the SAs for the deep database architecture whilst I fix coverage and coaching. Better to say that now than in a technical screen.

I work fully remote from Valencia, engaged through a non-Spanish entity. I ran a business across borders and time zones from a 40-foot boat, so asynchronous is how I work.

Happy to hop on a call to talk through any of the above, 20 minutes on where SA coverage is thinnest today would be a good start.

Thanks for your time and your consideration,
Ben Morrell
