Dear Hiring Team,

I have spent 18 years selling data platforms and APIs across EMEA and APAC, and four and a half of those years betting my family's safety on a weather forecast.

In 2019 we sold up and sailed ~6,000 nautical miles across nine countries with two children under four. Forecast data was not a product to me then; it was the thing I read every morning before deciding whether we moved. I know precisely what that data is worth when the decision is operational and the downside is real, which is the case Spire's customers in energy, aviation, agriculture and logistics are making every day.

The commercial record behind it: at Brightcove I owned Asia across 15+ countries and grew the region from **~\$4M to ~\$11.5M ARR** as VP, exceeding quota every year at **120%+** and leading the team that closed the company's largest global deal at **~\$4M ARR**. The partner channel I recruited, 15+ ISV and agency partners, carried **35% of regional pipeline**, which is the same leverage your posting asks for.

I have also built a territory of exactly this shape from nothing. For Encoding.com, an API-first video SaaS, I wrote the APAC market-entry thesis, ran an executive roadshow across Singapore, India, Malaysia and Thailand, grew qualified pipeline **1200%**, signed APAC's largest systems integrator and closed multiple six-figure ARR contracts, while continuing to expand European accounts including Sky, BBC and ITV. Running EMEA and APAC from one desk is not theoretical for me.

I will be straight about the gap: I do not come from meteorology or earth observation. What I bring instead is a seller who has taken complex technical data products to regulated and public-sector buyers through formal tenders, including Roche Diagnostics, the NHS and the BBC, and who gets technical fast with an MEng behind it.

I have run a business across borders and time zones, literally from a 40-foot boat: remote and self-directed is simply how I work.

Best regards,
Ben Morrell
