Dear RevenueCat team,

I applied because of one line in your posting: success here is not managing the largest possible portfolio of partners. That is the argument I have made my whole career, usually against internal pressure to count logos.

Through Ziplake I went after a single partnership with Roche Diagnostics: an \$80B counterparty, no existing channel, cold. I built the internal case, ran the outreach, and negotiated an exclusive global reseller agreement on a three-year minimum. Signing it was the easy half. The value came afterwards, in multiple NHS sales and a ten-year contract with OLVG in the Netherlands. One relationship, chosen deliberately and worked for years, beat any portfolio I could have assembled in the same time.

I have done it at ecosystem scale too. At Brightcove I recruited 15+ ISV and agency partners into a curated ecosystem that grew to source **35% of regional pipeline**, while I grew the region from ~\$4M to ~\$11.5M ARR as VP. At Livepeer I built the commercial operating system underneath the partnerships: forecasting, contracting cadence, CRM, partner training. An ecosystem you cannot measure will not stay funded, which is why I build the measurement in early.

On the technical bar, I do not need an integration translated for me. MEng, Senior Solutions Engineer to Technical Director to VP at Brightcove, and I still build: LLM agents, an MCP server, a Next.js platform with Stripe billing and a pricing engine behind it. I have wired up a subscription stack as the developer, which is a useful seat from which to judge which integrations are worth your engineering time.

What I would not oversell: I have not worked in the mobile app ecosystem. Eighteen years in API-first developer SaaS is adjacent, not identical, and I would rather say so now than have you find it in week three.

I built a business across borders and time zones from a 40-foot sailboat, so your remote-first, asynchronous setup is how I already work.

I would like 30 minutes on which of your existing integrations you would invest behind, and which you would let go.

Best regards,
Ben Morrell
