Dear Hiring Team,

Finding a market for something new, then proving it with real, paid traction, is the work I like most. Opening APAC for Encoding.com, I started from a written market-entry thesis: I chose the markets, ran the roadshow myself, developed the pipeline personally, and turned it into signed revenue. Qualified pipeline grew 1200%, I signed the region's largest systems integrator, and I closed multiple six-figure ARR contracts. That is the exact motion your role describes: read the signal, choose a direction, and earn a serious buyer commitment.

Your description asks for someone who can do it hands-on rather than manage a team that does, and who can turn what works into a repeatable playbook. At Livepeer I built the commercial operating system from scratch, the packaging, pricing, forecasting and contracting cadence that made an early motion repeatable. At Watching That I stood up the partnerships function from nothing and landed the first strategic partners. And through my own practice I have advised 20+ founders on go-to-market and product-market fit, which is early-stage, find-the-market work by nature.

Two things should make me a fit beyond the resume. First, I make complex ideas legible: my background is an engineering degree and a presales-to-VP path, and I build AI tooling myself, so I can help serious buyers understand a new category in plain sentences. Second, I already work exactly the way this role is structured, fractional and fully remote. I once ran a business, and Encoding.com's EMEA and APAC expansion, from a 40-foot boat across nine countries, so self-directed delivery under real constraint is simply how I operate.

I would welcome a conversation about helping find this category's market and proving it.

Best regards,

Ben Morrell
