---

Thank you for the opportunity to put myself forward for Senior Director, EMEA Channel & Ecosystem.

What caught me was the remit rather than the title. Three pillars, one number, and the number belongs to the ecosystem. Most partner seats at this level run a programme and borrow someone else's forecast.

In terms of what I bring - I have built partner-sourced revenue from nothing and then been measured on it. At Brightcove I recruited **15+ ISV/agency partners** and ran regional execution of the global partner programmes. That channel drove **35% of regional pipeline**, in a region I grew from **~$4M to ~$11.5M ARR** at **120%+** of quota.

The nearer parallel to your strategic-partner pillar is the reseller work. An Australian IoT vendor had a dormant **Roche Diagnostics ($80B)** relationship and no European channel. I built it into an **exclusive global reseller agreement**, seven figures on a three-year minimum.

It then stalled inside Roche's Legal/Compliance review. I kept their commercial sponsors visible so the process carried business pressure, whilst conceding what was policy at their scale. That channel produced multiple **NHS** sales and a **ten-year OLVG contract**.

I have run the other end of your model too. At Grass Valley I sold playout infrastructure across 12+ Asian countries through distributors/integrators, and before that did solutions engineering **inside** a systems integrator.

To be clear on one thing, since it is a full pillar. I have not run AWS/Azure/GCP co-sell or marketplace programmes directly. I have signed SI partnerships, including **APAC's largest systems integrator**, and built what co-sell runs on underneath. I think the programme mechanics are learnable, and would rather say so now.

On Infoblox - **Kentik** and **Axur** give partners a bigger story to carry than DDI alone. That is usually where a channel either re-tiers around the new value or keeps selling the old thing.

I am also an engineer by training (MEng) who still builds the current technology, **AI agents and MCP servers** on the Claude API. Where partners sell on architecture, I can hold the technical argument without a sales engineer. I work fully remote from Valencia, and one question sits on my side: the entity that would engage someone resident in Spain.

So with that in mind - happy to hop on a call to talk through any of the above. CV attached.

Thanks for your time and your consideration,
Ben Morrell
