Dear Henrik,

I take OEM and technology partnerships from first conversation to signed agreement, and I've done it with hardware manufacturers where the commercial deal only works if you can also talk credibly to the engineering team. That is exactly the seat Enode is hiring for, and the mission — making energy hardware controllable through one API so the grid can absorb renewables — is one I'd be glad to sell.

The closest parallel to your OEM motion: for an IoT hardware company I sourced, negotiated, and closed an exclusive global reseller agreement through the **Roche Diagnostics** channel — a 7-figure, three-year deal I ran end-to-end, from cold outreach at trade shows to signed contract. It drove multiple NHS sales and a ten-year deal in the Netherlands, and it worked because I could hold the technical, commercial, and legal conversations at once and feed real product insight back to the team.

That pattern repeats. At Brightcove I recruited **15+ strategic technology partners** that grew to **35% of regional pipeline**, and led the team that closed the company's **largest global deal, ~\$4M ARR** (\$12M over three years). At Livepeer I built the partnerships playbook from scratch — sourcing, contracting cadence, forecasting, CRM — and signed Tier-1 partners including a **\$500K deal with Aptos**. Building the operational playbook, not just working it, is something I actively enjoy.

One thing that sets me up well for the “redesign the playbook with AI” part of this role: I don't just use AI tools, I build them. I ship my own AI agents, MCP servers, and GTM automation and advise API-first founders, so I can redesign partnership processes with AI and speak the language of an OEM's API team, not just its commercial one.

I'm remote from Valencia on CET with strong European overlap, well-organised and independent — I've run a business across borders and time zones, literally from a 40-foot boat, so self-directed is simply how I work. I'd welcome a conversation about helping Enode sign and grow the OEM partnerships that matter.

Best regards,
Ben Morrell
