Hello ElevenLabs team,

Thank you for the opportunity. I have built a partner channel three times from nothing, and I have spent eighteen years in video infrastructure. ElevenCreative's model partners are video and image companies, so here those two halves are the same job.

The video side is Brightcove, Encoding.com/Telestream, Livepeer, Mux and Visionular, a video compression company. So the generative video landscape is a market I can already read, and a provider's engineering lead is a conversation I can hold on my own.

The closest thing I have run was at Watching That, a London streaming-data company with no partnerships function. I wrote the target list, the pitch and the commercial shape. It signed Brightcove, a partner they had chased for three or four years.

On the commercial half - for BinaryTech, a medical IoT company of only 15 people, I sourced Roche Diagnostics cold. It grew into an exclusive global reseller agreement against an $80B counterparty, seven figures on a three-year minimum.

Most common - it stalled inside their Legal and Compliance review. Unsticking it meant conceding everything that was only policy at that scale, whilst holding firm on exclusivity and the minimum commitment.

It ended up being signed, and that channel produced multiple NHS sales plus a ten-year contract with OLVG, a very large hospital group in Amsterdam.

In terms of the revenue half - at Brightcove I recruited 15+ ISV and technology partners across Asia Pacific and ran regional execution of the global partner programme. That channel reached 35% of regional pipeline whilst I led the region from ~$4M to ~$11.5M ARR, at 120%+ of quota.

On pricing, Encoding.com sold per minute and Livepeer sold usage-based compute, so consumption/credit economics are old ground. Europe and US East overlap is my normal working day, and I spent eight years based in Singapore, so Asia partner hours are a habit by now.

To be clear on the gap - I have not owned a model-provider relationship before, however the deal shape and the joint-launch motion are not new to me. I would go as far to say very few people have owned one for long, which is probably why this is green-field.

I also build with these models myself, on the Claude API.

Happy to hop on a call to talk through any of the above.

Thanks for your time and your consideration,
Ben Morrell
